

ps vs ps42 test: embedded CID TrueType fonts

Every font on this page is an embedded CID TrueType font (Verdana, Georgia), the only kind PDFium sends as Type 42 in /render=ps42. In /render=ps the same glyphs go as Type 3 outlines. The printer rasterizes Type 42 itself with TrueType hinting, so differences show mostly in the small sizes below (stem weight, spacing, 1 I | |). To confirm which one was sent, print to a file and search it: /outfile=C:\Temp\t.prn then findstr /c:"FontType 42" C:\Temp\t.prn (ps42: found; ps: not found).
